

PIAGGIO SOUND SYSTEM

Introduction

Nowhere in sight, nothing to operate, nothing to adjust. As simple as the magic of sound, Piaggio Sound System lets you listen music from your smartphone without taking it out of pocket.

Components

- *Digital Amplifier (recharged from the vehicle battery)*
- *Bluetooth system*
- *2 Exciters placed inside plastic in the vehicle*

How it works

- *Piaggio Sound System has to be connected to your smartphone with Bluetooth. After the first trial connection is automatically every time the instrumental panel is switched on. If this does not become available within 30 seconds, the device ends the search until the next time;*
- *It requires no adjustments (volume turns up and down directly from your smartphone);*
- *The exciters, driven by the amplifier, use the plastic of the vehicle as a sounding board without installing classic speakers;*
- *If the instrumental panel is switched off the connection stops after several minutes;*
- *Sound is over 100 db.*

Applications

**Piaggio Mp3
MY '14**

**Vespa 946
MY '13**

**Vespa 946
MY '14**
